

Shell Lubricants

INDUSTRIAL EQUIPMENT INITIAL FILL

Lubrication designed for product reliability and performance

At Shell Lubricants, working closely with industrial equipment manufacturers worldwide helps us to understand your challenges. We appreciate that to make your products competitive in the global marketplace, you need to enhance their performance. You also need a supplier that can reliably deliver the lubricants you need globally.

We understand the pressure to increase the efficiency and reliability of products, and to extend the life of the lubricants they contain.

From gearbox oils to bearing greases, we supply a wide range of innovative lubricants backed up by global expertise delivered by on-the-ground technicians.

We can work with you on joint product development projects, and use our research facilities to create lubricants specifically designed to be integral components of your products. Our lubricants and supporting services can help you to enhance your products' performance in a variety of ways, including improving their energy efficiency, oil-drain intervals and reliability.

EXTENDED BEARING LIFE

We offer a comprehensive range of specialist and general application greases for initial fill. Each grease is designed to meet the performance requirements of a particular bearing in a specific application, and is supplied to a consistently high quality.

Our joint research and development projects with leading bearing manufacturers are helping us meet tomorrow's requirements for bearings and to satisfy customers' demands for energy efficiency and extended grease and component life. We provide access to the latest technological developments, lubrication modelling, technical innovations and test methods. Our products comply with current health, safety and environmental regulations, thus they help equipment manufacturers to meet their sustainable development commitments.

HIGH COMPRESSOR OUTPUT

We work closely with major compressor manufacturers and focus on their needs and deliver value by bringing together commercial and technical expertise, and products and services from across Shell. We provide consistently high-quality products around the world for initial fill that can meet the exact requirements of an application or a process to help deliver high output and performance levels.

Giving advice and supplying products helps us to focus on current and future requirements. Ask us how our knowledge and experience can benefit your business.

WHERE LUBRICANTS CAN ADD VALUE

Some examples of ways that initial-fill lubricants can enhance product performance

APPROVALS AND SPECIFICATIONS

We have worked closely for many years with industrial equipment component manufacturers, which has helped us to understand your business. Our lubricants are used as first-fill fluids in equipment such as

- compressors
- bearings
- gearboxes
- mobile equipment
- hydraulic pumps.
